

SAHU
Mini air handling units
for indoor installation

Clivet. Change things

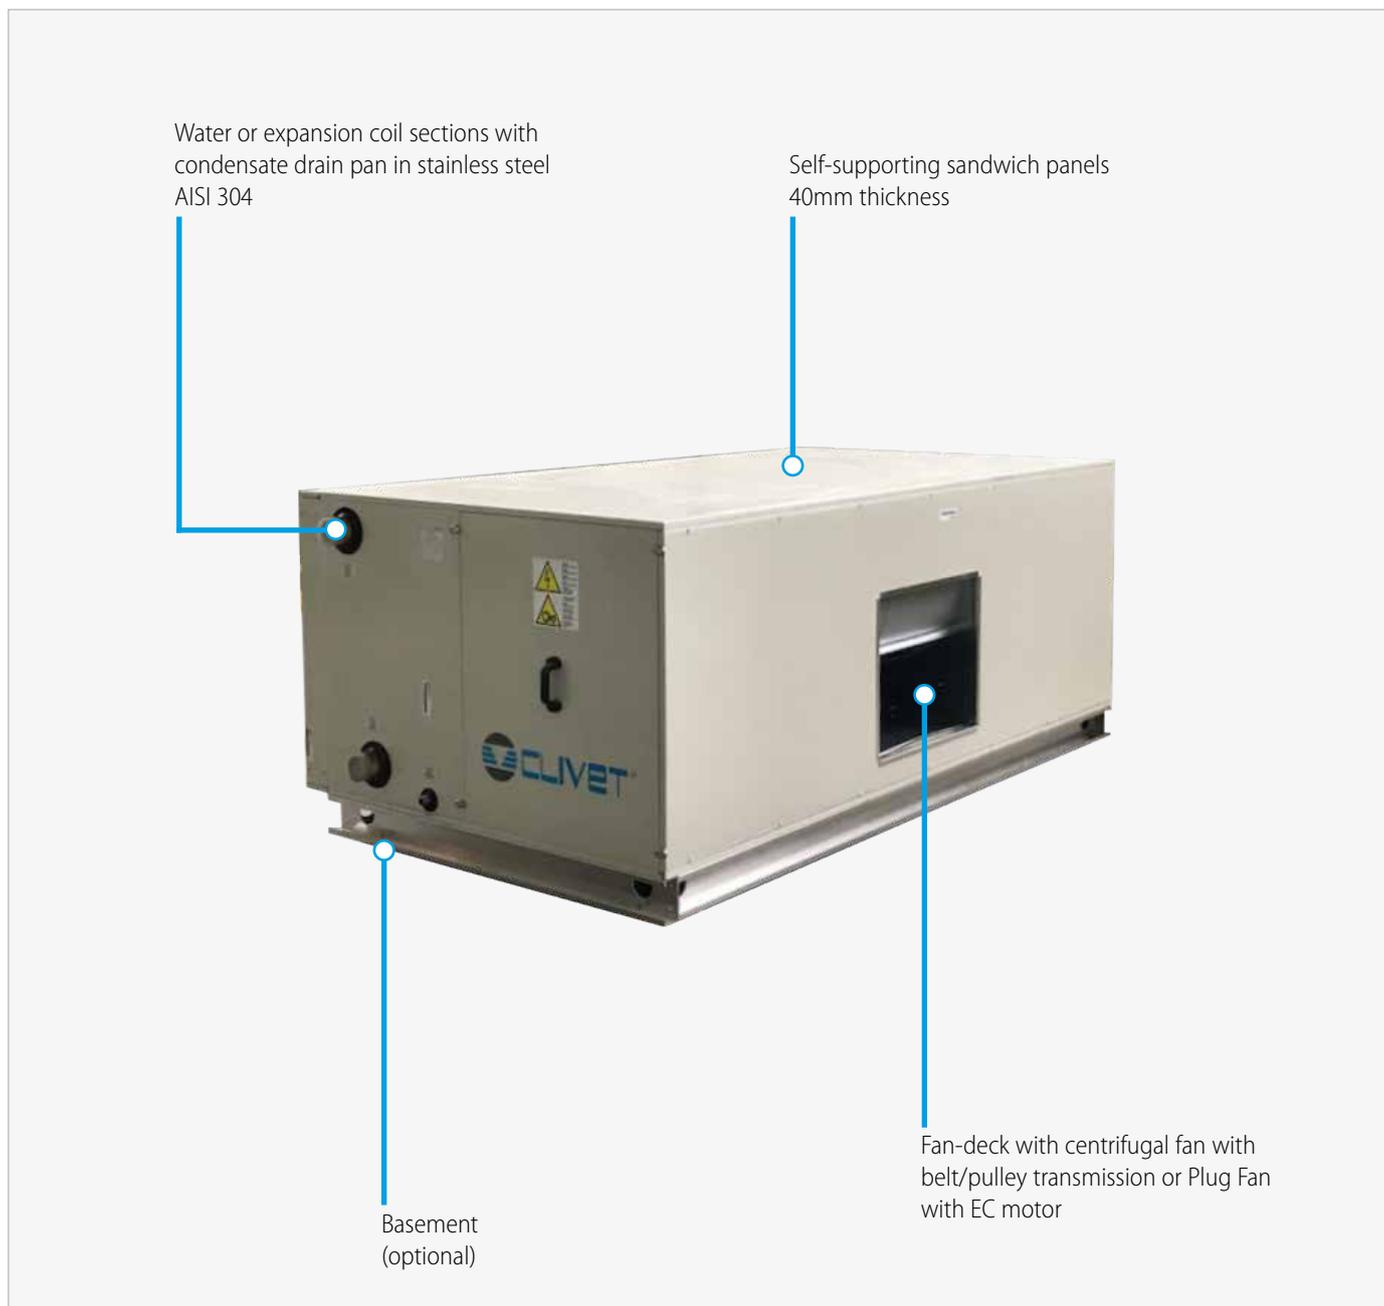

Solutions to ensure sustainable comfort and the well-being of people and the environment

In 30 years of working on the design, manufacturing and distribution of air conditioning and handling systems, combining high efficiency with minimal environmental impact, Clivet has developed solutions to ensure sustainable comfort and the well-being of people and the environment.

Designing and developing year-round air conditioning solutions with innovative technologies are part of Clivet's DNA, which means the company has always been ready for the future.

Features and applications

The SAHU Clivet project allows configurations suitable for any type of application. Everything through simple changes already made available and selectable.

- The completeness of the versions available and the flexibility of the SAHU range includes 8 sizes for horizontal and vertical installation, with air flow rates from 600 to 16.950 m³/h, with external static pressure up to 700 Pa in base of components and sizes of unit.
- This allows us to satisfy all the plant requirements, respecting the optimal design conditions in all situations that the market requires.
- SAHU units have a self-supporting panels (without frame) through a special fittings which makes the panels all removable.
- Are available with 4 or 6 rows water coil or with 4 rows expansion coil, with left or right water/gas connections and with a very large range of accessories.
- SAHU units are supplied without electric control and without components for regulation.
- The new release of the CTAPRO selection software permits the selection and quoting also for SAHU range.

Horizontal and vertical installation

The SAHU units can be installed both horizontally and vertically.

For floor applications the basement in aluminum 2 mm thickness is available as option for all sizes.

Sound and thermal insulated panels with thermal break

The panels of SAHU are double skin type, with double sheet steel and insulation through either polyurethane foam (thickness 40mm).

Materials of double skin panels:

- Panel internal skin: galvanized steel;
- Polyurethane injected;
- Panel external skin: galvanized preplastified sheet.

Features of polyurethane injected:

- Density: 43 kg/m³ according to EN 1602;
- Fire reaction class: 1 according to UNI 9177.

Centrifugal fan with belt/pulley transmission or Plug Fan EC

The SAHU units are available with centrifugal fan with double air inlet aluminium blades (forward curved fins) with belt/pulley transmission. Mounted on anti-vibration supports. Easy access to the variable diameter pulley of fan-deck for the settings.

Large range of motorizations is available which enables to satisfy any air-flow and static pressure. The efficiencies of selectable motors can be:

- IE1: Standard efficiency
- IE2: High efficiency
- IE3: Premium efficiency

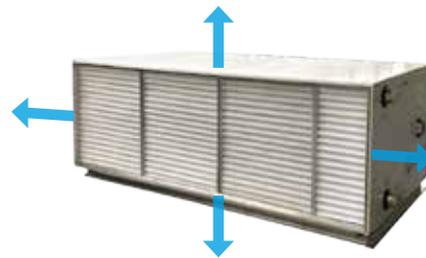

The SAHU units are also configurable with Plug Fan EC motors (IE4: Super premium efficiency).

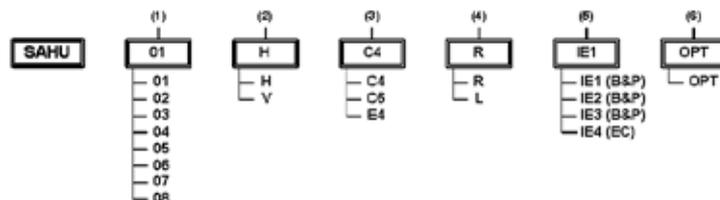

Wide range of filters removable from any side

The filter range extends from G4 to F9 making the SAHU units suitable in various applications.

All types of filters can be extracted for maintenance on each side of the SAHU (right, left, over and under).

Unit configuration

1. SIZE (nominal air flow):

- 01 (1.500 m³/h)
- 02 (2.090 m³/h)
- 03 (2.890 m³/h)
- 04 (4.020 m³/h)
- 05 (5.580 m³/h)
- 06 (7.750 m³/h)
- 07 (10.770 m³/h)
- 08 (15.000 m³/h)

2. VERSION:

- H = Horizontal
- V = Vertical

3. TYPE OF COIL:

- C4 = 4 Rows (water coil)
- C6 = 6 Rows (water coil)
- E4 = 4 Rows (expansion coil)

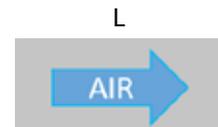

4. INSPECTION AND WATER/GAS CONNECTION:

- R = Right
- L = Left

5. POWER AND EFFICIENCY OF MOTOR:

- IE1 = Standard efficiency
- IE2 = High efficiency
- IE3 = Premium efficiency
- IE4 = Super premium efficiency

6. OPTIONS

Indication of inspection and water/gas connection (top view)

Main accessories

Additional heating water coil with 1 or 2 rows (CH1 or CH2)

Depending on the conditions, the heating coils are in these units.

The coils used with hot water are made of copper tubes with aluminum fins. The heat exchanger is designed to achieve the optimal pressure drop on both sides of the air and water.

The water inlet sides for the heating coils come from the bottom. All additional coils must be selected with the CTAPRO software.

Size			01	02	03	04	05	06	07	08

 (2) The weight indicated refer to unit without water inside of the coil.

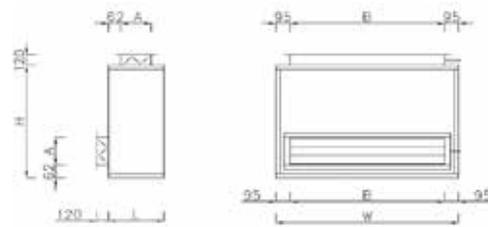

Mixing box with 2 regulation dampers (MBX)

The mixing section with two dampers is designed to save energy by mixing the required amount of fresh air and return air. The system uses the fresh air damper and the extract air damper to regulate the mixture of air to be treated. The dampers can be positioned on both sides, outside or inside. The control system of this mechanism is of vital importance thanks to the arrangement of fresh air / percentage of indoor air. The mixing box has a front recirculation damper with external damper, without actuator. It's available with manual control,

with flexible anti-vibration mounts and with basement. At the top there is a fresh air damper with the same options for the recirculation sections.

The panels of mixing box are double skin type, with double sheet steel and insulation through either polyurethane foam (thickness 40mm). In details:

- Panel internal skin: galvanized steel;
- Polyuretane injected;
- Panel external skin: galvanized preplasticated sheet.

Electric heaters (EC1 or EC2)

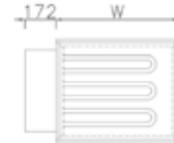

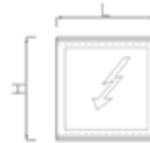

Electric heaters are generally used in units that have constant flow. It has staged structure and provided with safety thermostat.

During installation cabling and controlling this unit is highly important.

Construction:

- Frame: sandwich panel 40mm thickness;
- Elements: tubular finned electric heaters;
- Stages: from 1 to 4;
- Safety thermostat (automatic reset e manual reset);
- Terminal board;
- Main switch of electric heaters.

Filters

The filter range extends from G4 to F9. In details:

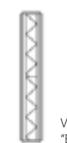

- Filter "A" version: G4 filter efficiency (48 mm thickness)
- Filter "B" version: M5, M6, F7, F8, F9 filter efficiency (98 mm thickness);
- Filter "C" version: G4 filter efficiency (48 mm thickness) + only one between M5, M6, F7, F8, F9 filter efficiency (98 mm thickness).

The panels of filter section are double skin type, with double sheet steel and insulation through either polyurethane foam (thickness 20 mm). In details:

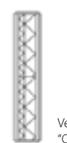

- Panel internal skin: galvanized steel;
- Polyuretane injected;
- Panel external skin: galvanized preplasticated sheet.

Selection Report

CTAPRO Clivet selection program for SAHU

CTAPRO is the powerful selection software to offer a fast and complete service for the customer, in order to make the correct technical choice and the economic evaluation of each SAHU. It is a complete tool that can configure any type of product and respond exactly to the most stringent design requirements. The result is a complete economic offer that includes all the technical data and drawings.

CTAPRO is a very advanced software developed and designed to quickly convert into an executive order.

CTAPRO integration has therefore made possible the complete automated management of the process, to reduce the time of the offer and delivery and improve the service to our customers.
